Sam Naffziger  
Corporate Fellow

Samuel Naffziger is a Corporate Fellow at AMD responsible for technical strategy with a focus on power technology development. He has been the lead innovator behind many of AMD's low power features and chiplet architecture. Naffziger has more than 30 years of industry experience with a background in microprocessors and circuit design. Beginning his career at HP, he also worked at Intel before landing at AMD, where he has been since 2006.

Naffziger received the Bachelor of Science in Electrical Engineering from CalTech in 1988 and Master of Science in Electrical Engineering from Stanford in 1993 and holds more than 120 U.S. patents in the field. He has authored dozens of publications and presentations on processors, architecture and power management and is a Fellow of the IEEE.
